

Reflector unit

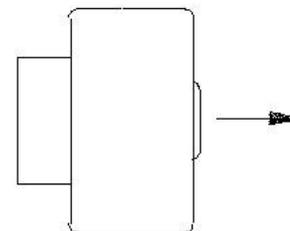

Reflector unit with fixed reflectors for uv medium pressure lamps type Aachen

Several lengths are available.
The reflectors are adjustable with screws when mounted into the machine to realise the best focus.

Explanations:

- EA Electrode distance of uv-lamp
(typical recommendation: EA = curing width plus 50-150 mm, depending from lamp distance to material)
- 1 uv-lamp
- 2 easy to replace reflector sheets
- 3 covers, to be removed when lamp have to be changed
- 4 tube connection flange, \varnothing 100 or 125 mm, for exhaust air. (other dimensions on request)
With long uv-lamps and depending of needed air volume 2 or 3 connection pieces symmetrical over the total length

All dimensions in mm. Dimensions A, B and EA depending from uv lamp.
